Sistemi di alimentazione del carburante
Топливные системы

VDO

# The Company

Alongside our many specialised solutions for automotive manufacturers, we also offer comprehensive solutions and services for the aftermarket. Spare parts of matching quality, supplied with the experience and proven expertise of an OEM supplier are a particular strength. Our comprehensive range of spare parts of matching quality is readily available and is synonymous with a perfect fit, simple installation and consistently reliable quality, offering significant advantages for distributors, workshops and consumers alike.

# Das Unternehmen

Neben unseren speziellen und vielfältigen Lösungen für Automobilhersteller bieten wir umfassende Lösungen und Serviceaktivitäten für den Aftermarket. Hierzu zählen insbesondere qualitativ gleichwertige Ersatzteile, die wir mit dem Wissen und der langjährigen Kompetenz eines Erstausrüsters anbieten. Das umfassende und zeitnah verfügbare Leistungsspektrum an Ersatzteilen steht für Passgenauigkeit, einen einfachen Einbau sowie gleichbleibende Qualität. So bieten qualitativ gleichwertige Ersatzteile Großhändlern, Werkstätten und Endkunden gleichermaßen deutliche Vorteile.

# L‘entreprise

Parallèlement à nos solutions particulières et multiples pour les constructeurs automobile nous offrons des solutions et des activités de service étendues pour l‘Aftermarket (marché de pièces de rechange et d‘accessoires). En font partie en particulier les pièces détachées qualitativement équivalentes que nous proposons avec le savoir et la compétence de longue durée d‘un premier équipementier de série. La gamme étendue de fournitures, disponibles à brève échéance, de pièces détachées représente la précision de l‘assemblage, un montage simple ainsi qu‘une qualité constante. Ainsi les pièces détachées qualitativement équivalentes offrent des avantages nets de la même manière aux grossistes, aux garages et aux clients finaux.

# Nuestra empresa

Además de las soluciones especiales y variadas que producimos para fabricantes de automóviles, ofrecemos numerosas soluciones y actividades de servicio para el mercado postventa. Entre éstas destacan en particular los recambios de calidad equivalente, que ofrecemos al mercado con los conocimientos y el nivel de competencia, forjados durante muchos años, de un fabricante de primeros equipos. Nuestro amplísimo espectro de recambios, disponibles al poco tiempo de aparecer en cada modelo de automóvil, se caracterizan por su precisión de ajuste, su montaje sencillo y su calidad constante. Por ello, los recambios de calidad equivalente suponen por igual claras ventajas para mayoristas, talleres y clientes finales.

# La società

Oltre a numerose soluzioni specializzate per i produttori di automobili offriamo soluzioni e servizi ad ampio spettro per il settore aftermarket (pezzi di ricambio e accessori). Tra questi rientrano in particolare pezzi di ricambio qualitativamente equivalenti che offriamo con il know-how e l’esperienza pluriennale di un fornitore OEM. La vasta gamma di pezzi di ricambio rapidamente disponibili rappresenta una soluzione ottimale, facilmente installabile e di qualità costante. I pezzi di ricambio qualitativamente equivalenti offrono pertanto ai distributori, alle officine e ai clienti finali notevoli vantaggi.

# Компания

Помимо узкоспециальных и широкопрофильных решений для автопроизводителей мы готовы предложить комплексные решения, включая набор сервисных операций, для послепродажного обслуживания автомобилей. В частности, по качеству равноценные оригинальным запасные части, которые мы, как предприятие-изготовитель, предлагаем партнерам на базе наших знаний и многолетнего опыта. С учетом широкого спектра услуг и возможности поставок в кратчайшие сроки гарантирована точность изготовления изделий, простой монтаж и стабильное качество производства. Поэтому приобретая по качеству равноценные оригинальным запасные части у нас, оптовые покупатели, промышленные предприятия и конечные пользователи в одинаковой степени получают очевидные преимущества.

## Keeping the wheels turning

Having fuel in the tank is crucial to vehicle operation. Without it the engine simply will not work.But a full tank of fuel is no use if the fuel supplyfrom tank to engine isn't totally reliable. High-quality VDO fuel supply systems offerthat assurance.Idle running of pumps, contaminated fuel orfaults in the vehicle electrics can lead to failure ofindividual components or, in a worst-case scenario, to failure of the entire system. VDO genuine brand replacement parts enable trouble-free replacement with low installation outlay andtop quality.

## Damit's immer richtig läuft

Voraussetzung für das Funktionieren eines Fahrzeugs ist Kraftstoff im Tank. Ohne ihn läuft kein Motor. Aber ein voller Tank nützt nichts, wenn nicht gleichzeitig eine zuverlässige Kraftstoffversorgung vom Tank in den Motor gewährleistet ist. VDO Kraftstoffsysteme bieten dies in höchster Qualität. Leerlauf der Pumpen, verschmutzte Kraftstoffe oder Fehler an der Fahrzeugelektrik können zum Ausfall einzelner Komponenten oder schlimmstenfalls des gesamten Systems führen. VDO Originalersatzteile ermöglichen dann einen reibungslosen Austausch mit geringem Montageaufwand und Top-Qualität.

## Pour rouler sans mauvaises surprises

Il va de soi que la présence de carburant dans leréservoir est essentielle à la bonne marche duvéhicule. Sans carburant, le moteur ne peut toutsimplement pas fonctionner. Mais un réservoirplein de carburant ne sert à rien si l'alimentationdu moteur n'est pas totalement fiable. Les systèmes haut de gamme VDO vous offrentcette garantie.Le fonctionnement des pompes au ralenti, la contamination du carburant ou la défaillance d'un circuit électrique peuvent provoquer la défaillancede certains composants, voire de l'ensemble dusystème. Les pièces d'origine VDO permettent un remplacement sans souci, avec unfaible coût d'installation et une qualité irréprochable.

## Haciendo girar las ruedas

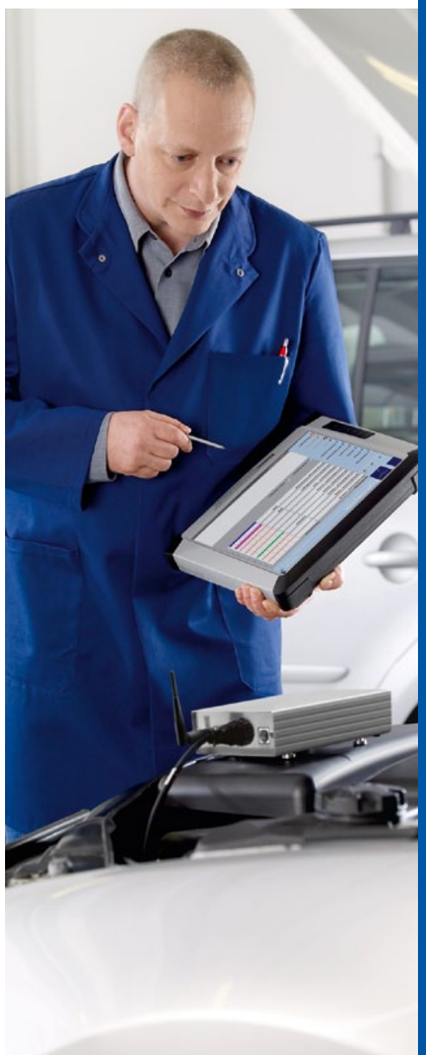
Tener combustible en el depósito es esencial parala marcha del vehículo. Sin este elemento, elmotor nunca podrá funcionar. Pero un depósitolleno de combustible no sirve para nada si el sistema de suministro del depósito al motor no estotalmente fiable. Los sistemas de suministro decombustible de alta calidad VDO ofrecenesta garantía. El funcionamiento en vacío de las bombas, elcombustible contaminado o los fallos en la electricidad del vehículo pueden provocar averías delos componentes individuales o, en el peor de loscasos, una avería del sistema completo. Las piezasde recambio de marca original VDO permiten la sustitución sin problemas con bajoscostes de instalación y una calidad superior.

## Il carburante non basta

La presenza di carburante nel serbatoio è essenziale per il funzionamento del veicolo. Ma avere ilserbatoio pieno è inutile se il sistema di alimentazione non è del tutto affidabile. L'alta qualità deisistemi VDO offre questa garanzia.Una pompa che gira a vuoto, del carburante contaminato o un malfunzionamento dell'impiantoelettrico del veicolo possono provocare un guastoai singoli componenti o, nel peggiore dei casi, all'intero sistema. Le parti di ricambio originali VDO consentono di effettuare leriparazioni necessarie nel migliore dei modi, senza problemi o spese eccessive.

## Чтобы система всегда работала как часы

Важной предпосылкой для функционирования автомобиля является наличие топлива в баке. Без него не работает ни один двигатель. Но полный бак может оказаться абсолютно бесполезным при отсутствии надежной системы подачи топлива из бака в двигатель. Топливные системы производства компании VDO предлагают решение этой задачи в наилучшем исполнении. Холостой ход насоса, загрязненное топливо или сбои в работе электрооборудования автомобиля могут привести к выходу из строя отдельных компонентов или, в самом печальном случае, всей системы в целом. Оригинальные запасные части VDO позволяют произвести замену без осложнений с минимальными материальными и физическими затратами на монтаж и с сохранением высокого уровня качества.



## Fuel Supply Units

Electric next-generation fuel pumps/fuel supply units installed in tanks guarantee a permanently reliable supply of fuel to the engine. They are employed as in-tank pumps for combustion engines, with injection systems for petrol or diesel supply. A return-flow returns unused fuel to the tank.

The primary functions are:
Fuel supply of the individual or central injection system, with specified pressure and throughput, once the in-vehicle voltage has been switched on System pressure retention in the fuel supply line under all operating conditions.

Fuel Supply Units The fuel supply unit generally consists of the fuel pump (sometimes with swirl pot), a filter and flange with corresponding connections. In addition, the supply unit can be equipped with a lever-type sender and can be used in combination with an immersion tubular-type sender.

## Kraftstoff-Fördereinheiten

Die im Tank montierten elektrischen Kraftstoffpumpen/ -Fördereinheiten der neuen Generation gewährleisten eine permanent zuverlässige Kraftstoffförderung zum Motor. Sie werden als In-Tank-Pumpen für Verbrennungsmotoren mit Einspritzanlage zur Benzin- oder Dieselförderung eingesetzt. Ein Rücklauf führt nicht verbrauchten Kraftstoff zurück zum Tank.

Die Hauptfunktionen sind:
Kraftstoffversorgung der Einzel- oder Zentraleinspritzanlage mit spezifiziertem Druck und Durchfluss nach Einschalten der Bordspannung, Systemdruckerhaltung in der Kraftstoffversorgungsleitung bei allen Betriebszuständen.

Die Kraftstoff-Fördereinheit besteht in der Regel aus der Kraftstoffpumpe (z. T. mit Schlingertopf),einem Filter und dem Flansch mit den entsprechenden Anschlüssen. Zusätzlich kann die Fördereinheit mit einem Hebelgeber ausgestattet sein bzw. in Kombination mit einem Tauchrohrgeber zum Einsatz kommen.

## Pompes à carburant complètes

Les pompes et systèmes électriques d'alimentation en carburant de haute technologie installés dans le réservoir garantissent une alimentation moteur fiable et constante. Ces systèmes sont constitués d'une pompe interne au réservoir pour les moteurs à combustion, et d'un système à injection pour l'alimentation en essence ou diesel. Un système de retour permet de réacheminer le carburant inutilisé vers le réservoir.

Les principales fonctions sont les suivantes:
Alimentation en carburant du système d'injection spécifique ou centralisé, avec une pression et un débit spécifiés, après mise sous tension du circuit électrique du véhicule Rétention de la pression système dans la conduite d'alimentation, quelles que soient les conditions de fonctionnement.

Le système d'alimentation en carburant est généralement constitué d'une pompe à carburant (avec ou sans cuve à turbulence), d'un filtre et d'une bride, avec les raccords adéquats. Le système peut également être équipé d'une jauge à levier et utilisé avec une jauge tubulaire immergée.

## Unidades de suministro de combustible

Cuando se instalan las bombas de combustible y unidades de suministro de combustible eléctricas de nueva generación en el depósito, se garantiza un suministro de combustible permanente y fiable al motor. Se utilizan en bombas de depósitos de combustible para motores de combustión, con sistemas de inyección de suministro de gasolina o gasoil. Un dispositivo de flujo de retorno devuelve al depósito el combustible que no ha sido utilizado.

Las funciones primarias son:
Suministro de combustible del sistema de inyección individual o central, a la presión y volumen de flujo especificados, una vez conectado a la alimentación del vehículo. Retención de la presión del sistema en la línea de suministro de combustible en todas las condiciones de funcionamiento.

La unidad de suministro de combustible consta general-mente de la bomba de combustible (a veces con cámera
de turbulencia), un filtro y una brida con las conexiones correspondientes. Además, la unidad de suministro puede estar equipada con un sensor de palanca, siendo posible su empleo con un sensor tubular de inmersión.

## Unità di alimentazione carburante

Le pompe di alimentazione/unità di alimentazione elettriche di nuova generazione installate nel serbatoio garantiscono un'alimentazione costante e affidabile del carburante al motore. Sono impiegate come pompe interne al serbatoio per i motori a combustione, che utilizzano sistemi di iniezione benzina o diesel. Un sistema a flusso invertito riporta il carburante inutilizzato nel serbatoio.

Le funzioni principali sono:
Alimentazione del carburante al sistema di iniezione individuale o centrale, alla pressione e alla capacità specificate, dopo la messa in funzionedel veicolo. Mantenimento della pressione del sistema nei condotti di alimentazione in qualsiasi condizione di esercizio.

L'unità di alimentazione del carburante è costituita general-mente dalla pompa di alimentazione (talvolta munita di vaso di turbolenza), da un filtro e da una flangia con i relativi collegamenti. Inoltre, l'unità di alimentazione può essere muni-ta di un galleggiante a leva o utilizzata congiuntamente a un galleggiante tubolare a immersione.

## Устройства подачи топлива

Установленные в топливном баке электрические устройства для регулирования подачи топливного насоса обеспечивают бесперебойное снабжение двигателя топливом. Они применяются в качестве внутрибаковых насосов для двигателей внутреннего сгорания с системой впрыска для подачи бензина или дизельного топлива. Неиспользованное горючее возвращается назад в топливный бак по обратной магистрали.

Основными функциями являются:
Подача топлива для точечной и центральной системы впрыскивания со специфицированным давлением и расходом после включения бортового напряжения. Поддержание уровня системного давления в трубопроводе системы подачи топлива в любых рабочих режимах.

Устройство подачи топлива состоит, как правило, из топливного насоса (возможно наличие успокоительной камеры), фильтра и фланца с соответствующими соединениями. Дополнительно устройство подачи может быть оснащено датчиком рычажного типа или использоваться в комбинации с датчиком с погружной трубкой.

## Tubular-Type Senders

Immersion tubular-type senders are also used for measuring the fuel level, in association with an electrical indicator.

How they work
The liquid of the fuel level to be measured contains a floater, which rises or falls when the level changes. Contact springs, which are attached to the floater, slide over two resistance wires running parallel to the floater movement and generate a resistance value which is proportional to the liquid level. The value of the respective resistance is measured by an electrical indicator and displayed in terms of fuel level values. The liquid to be monitored reaches the conduit through a flood boring. By this means, the inflow and outflow speed and the transmission of short-term variations of the liquid level to the floater contained in the conduit (e.g. due to cornering or braking) is dampened. With some transmitters the grounding is attached to the casing. Other trans-mitters are without grounding, i.e. the grounding is routed over a separate connection.
Tubular-type senders can be additionally equipped with a warning contact in order to signal the attainment of a filling level limit value (reserve), as well as for continuous measurement.

## Tauchrohrgeber

Auch Tauchrohrgeber dienen der Messung des Kraftstoff-vorrates in Verbindung mit einem elektrischen Anzeigegerät.

Funktionsweise
Die Flüssigkeit des zu messenden Vorrates trägt einen Schwimmer, der mit dem Flüssigkeitsniveau sinkt oder steigt. Dabei gleiten am Schwimmer befestigte Kontaktfedern über zwei parallel zur Schwimmerbewegung verlaufende Widerstandsdrähte und stellen einen der Flüssigkeitshöhe proportionalen Widerstandswert ein. Die Größe des jeweiligen Widerstandswertes wird mit einem elektrischen Anzeigegerät gemessen und in Vorratswerten angezeigt.
Die zu überwachende Flüssigkeit gelangt durch eine Flutungsbohrung in das Schutzrohr. Dadurch wird die Ein- und Ausströmungsgeschwindigkeit und die Übertragung von kurzzeitigen Schwankungen des Flüssigkeitsniveaus (z.B. Kurvenfahren oder Bremsen) auf den im Schutzrohr befindlichen Schwimmer gedämpft Bei einigen Gebern liegt die Masse am Gehäuse an. Andere Geber sind massefrei, d.h. die Masse wird über einen separaten Anschluss zugeführt.
Tauchrohrgeber können zusätzlich mit einem Warnkontakt ausgestattet sein, um neben der kontinuierlichen Messung das Erreichen eines Füllstandgrenzwertes (Reserve) zu signalisieren.

## Jauges tubulaires

Associées à un indicateur électrique, les jauges tubulaires permettent de mesurer le niveau de carburant.

Fonctionnement
Le liquide dont le niveau est mesuré contient un flotteur, qui monte/descend en fonction des variations de niveau. Des ressorts de contact reliés au flotteur glissent sur deux fils résistants parallèles au mouvement du flotteur, afin de générer une valeur de résistance proportionnelle au niveau de liquide. La valeur de la résistance est mesurée au moyen d'un indicateur électrique et affichée sous forme de niveau de carburant.
Le liquide contrôlé atteint le conduit via un alésage de débordement. Par ce moyen, le débit entrant et sortant, et la transmission des variations à court terme du niveau de liquide vers le flotteur se trouvant dans le conduit (par ex-emple dans un virage ou en cas de freinage) sont atténués. Sur certains émetteurs, la masse est reliée au blindage. Sur d'autres émetteurs, il n'y a pas de masse : la masse est dirigée vers une autre connexion.
Les jauges tubulaires peuvent également être munies d'un contact avertisseur permettant d'assurer une mesure continue et de signaler qu'un niveau de remplissage limite a été atteint (réserve).

## Sensores tubulares

Los sensores tubulares de inmersión se utilizan también para medir el nivel de combustible, asociados a un dispositivo de indicación eléctrico.

Modo de funcionamiento
El combustible cuyo nivel se desea medir contiene un flotador, que sube o baja con los cambios de nivel. Los contactos, conectados al flotador se deslizan sobre dos resistencias paralelas al movimiento del flotador generan un valor de resistencia proporcional al nivel de líquido. El valor de la resistencia se mide con un dispositivo indicador eléctrico y se presenta en forma de valores de nivel de combustible. El líquido que se desea controlar llega hasta el tubo del sensor a través de un orificio de admisión. Por este medio, aumenta el flujo de entrada y de salida y se regula la transmisión de las variaciones a corto plazo del nivel del líquido del flotador que se encuentra introducido en el conducto (por ejemplo, a causa de un choque o una frenada). En algunos sensores, la masa va conectada a la carcasa. Otros, carecen de masa, es decir, se dirigen a una conexión independiente.
Los sensores tubulares pueden estar dotados de un contacto de advertencia adicional, para indicarque se ha alcanzado el valor límite de llenado (reserva) así como para efectuar mediciones continuas.

## Galleggianti tubolari

I galleggianti tubolari a immersione sono usati in associ-azione con un indicatore elettrico per misurare il livello di carburante.

Come funzionano
Il carburante contiene un galleggiante che sale o scende all'aumentare o al diminuire del livello. Le molle di contatto collegate al galleggiante scorrono su due conduttori di resistenza che corrono paralleli al movimento del galleggiante e stabiliscono un valore di resistenza proporzionale al livello del liquido. Il valore della rispettiva resistenza viene misurato con un indicatore elettrico e visualizzato con valori espressi in termini di livello di carburante.
Il liquido da controllare raggiunge il condotto attraverso un foro. In questo modo, la velocità di ingresso e di uscita e la trasmissione delle variazioni a breve termine del livello del liquido rispetto al galleggiante contenuto nel condotto (per esempio in caso di curva o frenata) vengono smorzate. In alcuni trasmettitori, la terra è collegata alla carcassa. Altri trasmettitori sono privi di messa a terra e la stessa avviene su un altro collegamento.
I galleggianti tubolari possono essere muniti anche di un contatto di segnalazione che oltre a indicare il raggi-ungi-mento di un valore limite del livello (riserva) consente la misurazione continua.

## Датчики с погружной трубкой

Датчики с погружной трубкой также служат для измерения запаса топлива и используются вместе с электрическим индикаторным устройством.

Принцип работы
На поверхности жидкости, запас которой необходимо измерить, находится поплавок, который опускается или поднимается при изменении уровня жидкости. При этом контактные щетки, прикрепленные к поплавку, скользят по двум проволокам высокого сопротивления, расположенным параллельно движению поплавка и оказывают пропорциональное уровню жидкости сопротивление. Величина сопротивления фиксируется электрическим индикационным устройством и отображается в виде величины уровня топлива.
Жидкость, запас которой необходимо измерить попадает через сливное отверстие в предохранительную трубу. Таким образом, происходит гашение скорости входа и выхода жидкости, а также переноса краткосрочных колебаний уровня жидкости (напр. при движении по кривой или торможении) на находящийся в предохранительной трубе поплавок. В некоторых датчиках «масса» выведена на корпус. Другие не соединены с корпусом, т.е. «масса» выведена через отдельное соединение.
Датчик с погружной трубкой может быть дополнительно оснащен контактом предупредительного сигнала, чтобы наряду с непрерывным измерением оповещать о достижении предельного значения уровня наполнения (запаса).

## Lever-Type Senders

Fuel tank contents are measured by means of senders (lever-type/tubular-type senders), which either form one unit with the pump or are installed separately.

Lever-type senders, in conjunction with an electrical indicator, are used to measure the fuel level.

How they work
The liquid of the fuel level to be measured contains a floater which rises or falls when the level changes and, by means of a lever, then causes a brush wiper spring to be moved on a resistance winding or a thick-film resistor. In both cases, an adaptation to the tank characteristics is implemented.

A resistance value corresponding to the liquid level is generated. The value of the respective resistance is measured by an electrical indicator and displayed in terms of fuel level values. With some transmitters the grounding is attached
to the casing. Other transmitters are without grounding, i.e. the grounding is routed over a separate connection.

Lever-type senders can be additionally equipped with a warning contact in order to signal the attainment of a filling level limit value (reserve), as well as for continuous measurement.

## Hebelgeber

Die Messung des Tankinhaltes erfolgt mittels Sensoren (Hebel-/Tauchrohrgeber), die entweder mit der Kraftstoff-Förder-einheit eine Einheit bilden oder aber separat verbaut sind.

Hebelgeber dienen zur Messung des Kraftstoffvorrates in Verbindung mit einem elektrischen Anzeigegerät.

Funktionsweise
Die Flüssigkeit des zu messenden Vorrates trägt einen Schwimmer, der bei Niveauänderung sinkt oder steigt und dabei über einen Hebel eine Schleiffeder auf einer Widerstandswicklung oder einem Dickschichtwiderstand bewegt. In beiden Fällen erfolgt eine Anpassung an die Tankkennlinie.

Ein der Flüssigkeitshöhe entsprechender Widerstandswert wird eingestellt. Die Größe des jeweiligen Widerstandswertes wird mit einem elektrischen Anzeigegerät gemessen und in Vorratswerten angezeigt. Bei einigen Gebern liegt die Masse am Gehäuse an. Andere Geber sind massefrei, d.h. die Masse wird über einen separaten Anschluss zugeführt.

Hebelgeber können zusätzlich mit einem Warnkontakt ausgestattet sein, um neben der kontinuierlichen Messung das Erreichen eines Füllstandgrenzwertes (Reserve) zu signalisieren.

## Jauges à levier

Les jauges sont utilisées pour mesurer le niveau de carburant dans le réservoir (jauges à levier/jauges tubulaires) ; elles peuvent faire partie intégrante du système d'alimentation ou être installées séparément.

Associées à un indicateur électrique, les jauges à levier permettent de mesurer le niveau de carburant.

Fonctionnement
Le liquide dont le niveau est mesuré contient un flotteur, qui monte/descend en fonction des variations de niveau ; un levier permet d'actionner un ressort de porte-balais sur un bobinage à résistance ou une résistance en couche épaisse. Dans les deux cas, une adaptation aux caractéristiques du réservoir a lieu.

Une valeur de résistance correspondant au niveau de liquide est générée. La valeur de la résistance est mesurée au moyen d'un indicateur électrique et affichée sous forme de niveau de carburant. Sur certains émetteurs, la masse est reliée au blindage. Sur d'autres émetteurs, il n'y a pas de masse : la masse est dirigée vers une autre connexion.

Les jauges à levier peuvent également être munies d'un contact avertisseur permettant d'assurer une mesure continue et de signaler qu'un niveau de remplissage limite a été atteint (réserve).

## Sensores de palanca

La medición del contenido del depósito de combustible se lleva a cabo por medio de sensores (de palanca o tubulares), que pueden formar una sola unidad con la bomba o ir instalados por separado.

Los sensores de palanca, asociados a un dispositivo de indicación eléctrico, se emplean para realizar la medición del nivel de combustible.

Modo de funcionamiento
El depósito de combustible contiene un flotador, que sube o baja con los cambios de nivel y que a continuación, por medio de una palanca, hace que un resorte de escobillas se desplace sobre un devanado de resistencia o un resistor de película gruesa. Este sistema se adapta a las características de cada depósito.

Se establece un valor de resistencia que corresponde al nivel del líquido. El valor de la resistencia se mide con un dispositivo indicador eléctrico y se presenta en forma de valores de nivel de combustible. En algunos sensores, la masa va conectada a la carcasa. Otros carecen de masa, es decir, se dirigen a una conexión independiente.

Los sensores de palanca pueden estar dotados de un contacto de advertencia adicional, para indicar que se ha alcanzado el valor límite de llenado (reserva) así como para efectuar mediciones continuas.

## Galleggianti a leva

La misurazione del livello di carburante nel serbatoio avviene per mezzo di galleggianti (a leva o tubolari) che possono costituire parte integrante della pompa oppure essere installati a parte.

I galleggianti a leva sono utilizzati insieme a un indicatore elettrico per misurare il livello di carburante.

Come funzionano
Il carburante contiene un galleggiante che sale o scende all'aumentare o al diminuire del livello e, mediante una leva, aziona la molla di una spazzola su un avvolgimento di resistenza o su un resistore a pellicola spessa. In entrambi i casi, è necessario un adattamento alle caratteristiche del serbatoio.

Si stabilisce un valore di resistenza che corrisponde al livello del liquido. Il valore della rispettiva resistenza viene misurato con un indicatore elettrico e visualizzato con valori espressi in termini di livello di carburante. In alcuni trasmettitori, la terra è collegata alla carcassa. Altri trasmettitori sono privi di messa a terra e la stessa avviene su un altro collegamento.

I galleggianti a leva possono essere muniti anche di un contatto di segnalazione che oltre a indicare il raggiungimen-to di un valore limite del livello (riserva) consente la misurazione continua.

## Датчик рычажного типа

Измерение уровня топлива в баке производится с помощью датчиков (датчиков рычажного типа / датчиков с погружной трубкой), которые либо образуют один унифицированный узел с устройством подачи топлива, либо устанавливаются отдельно.

Датчики рычажного типа в связке с электрическим индикаторным устройством служат для измерения запаса топлива.

Принцип работы
На поверхности жидкости, запас которой необходимо измерить, находится поплавок, который опускается или поднимается при изменении уровня жидкости и при этом посредством рычага приводит в движение контактную щетку обмотки резистора или толстоплёночного резистора. В обоих случаях имеет место адаптация к характеристической кривой уровня заполнения топливного бака.

Устанавливается сопротивление, соответствующая данному уровню жидкости. Величина сопротивления фиксируется электрическим индикационным устройством и отображается в виде величины уровня топлива. В некоторых датчиках «масса» выведена на корпус. Другие не соединены с корпусом, т.е. «масса» выведена через отдельное соединение.

Датчик рычажного типа может быть дополнительно оснащен контактом предупредительного сигнала, чтобы наряду с непрерывным измерением оповещать о достижении граничного значения уровня наполнения (запаса).

## Fuel Pumps with Swirl Pot

The fuel pump with swirl pot is a component of a fuel supply unit sited in the tank. Fuel pumps with swirl pot are equipped with a filter.

## Kraftstoffpumpen mit Schlingertopf

Die Kraftstoffpumpe mit Schlingertopf ist Bestandteil einer Kraftstoff-Fördereinheit, die imTank betrieben wird.
Die Kraftstoffpumpen mit Schlingertopf sind mit einem Filter ausgestattet.

## Pompes à carburant avec support

La pompe à carburant avec cuve à turbulence est un élément du système d'alimentation situé dans le réservoir. Les pompes à carburant avec cuve à turbulence sont équipées d'un filtre.

## Bombas de combustible con cámerade turbulencia

La bomba de combustible con cámera de turbulencia es un componente de una unidad de suministro de combustible situada en el depósito. Las bombas de combustible con cámera de turbulencia están provistas de un filtro.

## Pompe di alimentazione con vaso diturbolenza

Il vaso di turbolenza della pompa di alimentazione è un componente dell'unità di alimentazione situato nel serbatoio. Le pompe di alimentazione con vaso di turbolenza sono munite di filtro.

## Топливные насосы с успокоительной камерой

Топливный насос с успокоительной камерой является составной частью устройства подачи топлива, установленной в топливном баке.
Топливные насосы с успокоительной камерой оснащены фильтром.

## Fuel Filters

Fuel filters are an important part of every fuel supply unit, providing vital protection for fuel systems and engines against damage caused by tiny particles of dirt. Depending on the system, one or more filters can be fitted in conjunction with a fuel pump or supply unit.

## Kraftstoff-Filter

Kraftstoff-Filter sind wichtige Bestandteile einer Kraftstoff-Fördereinheit. Durch ihre Siebfunktion schützen sie das Kraftstoffsystem und den Motor vor der Zerstörung durch die Einlagerung immer kleiner werdender Schmutzpartikel.
Je nach System können ein oder mehrere Kraftstoff-Filter zusammen mit der Kraftstoffpumpe bzw. -Fördereinheit verbaut sein.

## Filtres à carburant

Le filtre à carburant est une pièce importante du système d'alimentation en carburant car il permet de protéger le système d'alimentation et le moteur contre les dommages causés par les fines impuretés contenues dans le carburant. Selon le système installé, un ou plusieurs filtres peuvent avoir été posés parallèlement à la pompe à carburant ou au système d'alimentation.

## Filtros de combustible

Los filtros de gasolina son una parte importante de cualquier sistema de suministro de combustible, ya que protegen tanto al motor como a sus componentes de posibles daños provocados por pequeñas partículas de suciedad. Dependiendo del sistema, se pueden utilizar uno o más filtros en conjunción con una bomba o unidad de suministro.

## Filtri carburante

I filtri carburante proteggono i componenti dell'impianto di alimentazione e il motore dai danni causati dalle particelle di sporco e costituiscono quindi una parte molto importante dell'unità di alimentazione. A seconda dell'impianto, possono essere montati uno o più filtri, unitamente ad una pompa o unità di alimentazione.

## Топливные фильтры

Топливный фильтр представляет собой одну из важнейших составных частей устройства подачи топлива. Благодаря своей фильтрующей функции они защищают топливную систему и двигатель от разрушения в результате накопления постоянно уменьшающихся частиц загрязнений. В зависимости от системы в топливном насосе или устройстве подачи топлива могут быть установлены несколько топливных фильтров.

## Fuel Pumps

The fuel pump is a component of a fuel supply unit sited in the tank. Within the supply units, the pump is sometimes installed in a swirl pot. Fuel pumps are sometimes equipped with a filter

## Kraftstoffpumpen

Die Kraftstoffpumpe ist Bestandteil einer Kraftstoff-Förder-einheit, die im Tank betrieben wird. Zum Teil ist die Pumpe innerhalb der Fördereinheit in einem Schlingertopf verbaut. Die Kraftstoffpumpen sind zum Teil mit einem Filter ausgestattet.

## Pompes à carburant seules

La pompe à carburant est un élément du système d'aliment-ation situé dans le réservoir. A l'intérieur du système, la pompe est parfois installée dans une cuve à turbulence. Les pompes à carburant sont parfois équipées d'un filtre.

## Bombas de combustible

La bomba de combustible es un componente de una unidad de suministro de combustible situada en el depósito que puede instalarse en una cámera de turbulencia y que, en ocasiones, están equipadas con un filtro.

## Pompe di alimentazione

La pompa di alimentazione è un componente dell'unità di alimentazione situato nel serbatoio. Talvolta, la pompa è installata in un vaso di turbolenza, chiamato comunemente cestello.
Le pompe possono essere munite di filtro.

## Топливные насосы

Топливный насос является составной частью устройства подачи топлива, установленной в топливном баке. Насос часто крепится внутри устройства подачи топлива в успокоительной камере. Топливные насосы могут быть оснащены фильтрами.

## Petrol injection valve

The exact quantity of fuel is determined for every engine operating state. The injection valve injects the calculated quantity exactly dosed at the prescribed time in front of the cylinder input valve and thus ensures clean and efficient fuel utilization.

## Benzin-Einspritzventil

Für jeden Betriebszustand des Motors wird die exakte Menge an Kraftstoff ermittelt. Das Einspritzventil sprüht die errechnete Menge genau und dosiert, zum vorgegebenen Zeitpunkt, vor das Einlassventil des Zylinders und sorgt somit für eine saubere und effiziente Ausnutzung des Kraftstoffes.

## Injection essence

La quantité exacte de carburant est définie pour chaque état de fonctionnement du moteur. L'injecteur injecte précisément la quantité calculée d'essence et effectue le dosage, au moment donné, en amont de la vanne d'admission du cylindre, assurant ainsi une utilisation saine et efficace du carburant.

## Valvola di iniezione benzina

Per ogni condizione di esercizio del motore viene rilevata la giusta quantità di carburante. La valvola di iniezione spruzza la quantità calcolata in modo preciso e dosato, nel momento prestabilito, davanti alla valvola di aspirazione del cilindro assicurando, in tal modo, un utilizzo pulito ed efficiente del carburante.

## Válvula de inyección de gasolina

Para cada estado de funcionamiento del motor se determina la cantidad exacta de combustible. La válvula de inyección inyecta exactamante la cantidad calculada y dosifica, en el momento predeterminado, delante de la válvula de admisión del cilindro y vela por un aprovechamiento limpio y eficiente del combustible.

## Бензиновая форсунка

Каждому рабочему состоянию двигателя соответствует точное количество подаваемого топлива. Форсунка впрыскивает точно рассчитанное количество топлива дозировано, в заданный момент времени перед клапаном подачи цилиндра и тем самым обеспечивает аккуратное и эффективное использование топлива.

## Fuel Pressure Regulators

The fuel pressure regulator is attached at the end of the distribution pipe and keeps the fuel pressure at a constant value. Located in the metal casing of the fuel pressure regulator there is a spring-loaded membrane, which allows the opening of the return-flow channel if the set pressure is exceeded. In this way, surplus fuel can flow back to the fuel tank.

## Kraftstoff-Druckregler

Der Kraftstoff-Druckregler ist am Ende des Verteilerrohres angebracht und hält den Kraftstoffdruck auf einem konstanten Wert. Im Metallgehäuse des Kraftstoff-Druck-reglers gibt eine federbelastete Membran beim Über-schreiten des eingestellten Druckes den Rücklaufkanal frei. Dadurch kann überschüssiger Kraftstoff zum Kraftstoff-behälter zurückfließen.

## Régulateurs de pression de carburant

Le régulateur de pression de carburant est relié à l'extrémité de la conduite de distribution et permet de maintenir le niveau de pression du carburant. A l'intérieur du boîtier métallique du régulateur, se trouve une membrane à ressort permettant l'ouverture du canal d'écoulement inverse en cas de surpression. Ceci permet aux surplus de carburant de retourner dans le réservoir.

## Reguladores de presión de combustible

El regulador de presión del combustible está conectado al final de la tubería de distribución y mantiene la presión de combustible a un valor constante. En la carcasa metálica del regulador de presión de combustible, existe una membrana accionada por un muelle que permite la apertura del canal de flujo de retorno en caso de sobrepasarse la presión establecida. De este modo, el exceso de combustible puede dirigirse de nuevo hacia el depósito de combustible.

## Regolatore di pressione carburante

Il regolatore di pressione del carburante è collegato in fondo al tubo di distribuzione e mantiene costante la pressione del carburante. All'interno della carcassa metallica del regolatore di pressione si trova una membrana caricata a molla che consente l'apertura del canale di riflusso in caso di superamento della pressione prestabilita. In questo modo, il carburante in eccesso può tornare nel serbatoio.

## Регулятор давления топлива

Регулятор давления топлива устанавливается в конце распределительной трубы и поддерживает постоянное давления топлива.
Расположенная в металлическом корпусе регулятора давления топлива подпружиненная мембрана при превышении установленного давления деблокирует канал обратной подачи. В результате лишнее топливо может стекать обратно в топливный бак.

| **T2 …** | Capacity of fuel tank [L]: ... |
| **T3 …** | Sensor length [mm]: ... |
| **T4 …** | Fuel type: ... |
| **Benzin** | Petrol |
| **Diesel** | Diesel |
| **Biodiesel** | Bio Diesel |
| **T5** | Not suitable for biodiesel |
| **T6** | Suitable for biodiesel |
| **T7** | with swirl pot |
| **T8** | with fastening material |
| **T9** | with pump |
| **T10** | with filter |
| **T11** | with connector parts |
| **T12** | with flange |
| **T13** | Without pump |
| **T14** | Without flange |
| **T15** | Without damper and holder |
| **T16** | with holder |
| **T17** | with seal |
| **T18** | Without tank sender unit |
| **T19 …** | For ... |
| **T20** | For vehicles with low fuel warning light |
| **T21** | For vehicles with tank indicator lamp |
| **T22** | For vehicles with metal tank |
| **T23** | For vehicles with fuel cooling |
| **T24** | For vehicles without low fuel warning light |
| **T25** | Fit together with the fuel pump |
| **T26** | Installation separate from supply unit |
| **T27 …** | For OE number: ... |
| **T28 …** | Restriction (manufacturer): ... |
| **T29 …** | Equipment: ... |
| **T30 …** | Mounting side: ... |
| **R** | Right |
| **L** | Left |
| **H** | Rear |
| **V** | Front |
| **T31** | For vehicles without catalytic converter |
| **T32** | For vehicles with intercooler |
| **T33** | For vehicles with intake-manifold fuel injection |
| **T34** | For vehicles with air-conditioning |
| **T35** | For vehicles with trailer coupling |
| **T36** | For vehicles with level control system |
| **T37** | For vehicles with fuel computer |
| **T38** | For vehicles without fuel computer |
| **T39** | For vehicles without skibag |
| **T40** | For vehicles with auxiliary heater |
| **T41** | For vehicles without auxiliary heater |
| **T42 …** | Operating Mode: ... |
| **EL** | Electric |
| **EG** | Electrically Controlled |
| **T43** | Solenoid Valve |
| **T44** | Control Valve |
| **T45** | With fore-/backflow |
| **T46 …** | Operating Voltage: ... |

| Abkürzung | Beschreibung (D) |
|---|---|
| **(+) …** | Für ... |
| **(-) …** | Nicht für ... |
| **BR** | Brasilien |
| **IND** | Indien |
| **RA** | Argentinien |
| **D-SP** | Dämpfung für Schlingertopf |
| **H-SP** | Halter für Schlingertopf |
| **FI** | Kraftstoff-Einspritzdüse |
| **Filter** | Filter |
| **FSU** | Kraftstoff-Fördereinheit |
| **FP** | Kraftstoffpumpe |
| **FPR** | Kraftstoff-Druckregler |
| **FPwSP** | Kraftstoffpumpe mit Schlingertopf |
| **LTS** | Hebelgeber |
| **OP** | Ölpumpe |
| **TTS** | Tauchrohrgeber |
| **T1 …** | Druck [bar]: ... |
| **T2 …** | Tankinhalt [L]: ... |
| **T3 …** | Sensorlänge [mm]: ... |
| **T4 …** | Kraftstoffart: ... |
| **Benzin** | Benzin |
| **Diesel** | Diesel |
| **Biodiesel** | Biodiesel |
| **T5** | Nicht für Biodiesel geeignet |
| **T6** | Für Biodiesel geeignet |
| **T7** | mit Schlingertopf |
| **T8** | mit Befestigungsmaterial |
| **T9** | mit Pumpe |
| **T10** | mit Filter |
| **T11** | mit Anschlussteilen |
| **T12** | mit Flansch |
| **T13** | ohne Pumpe |
| **T14** | ohne Flansch |
| **T15** | Ohne Dämpfung und Halter |
| **T16** | mit Halter |
| **T17** | mit Dichtung |
| **T18** | ohne Tankgeber |
| **T19 …** | Für ... |
| **T20** | Für Fahrzeuge mit Tankkontroll-Leuchte |
| **T21** | für Fahrzeuge mit Tankkontroll-Leuchte |
| **T22** | für Fahrzeuge mit Metalltank |
| **T23** | Für Fahrzeuge mit Kraftstoff-Kühlung |
| **T24** | Für Fahrzeuge ohne Tankkontroll-Leuchte |
| **T25** | Einbau zusammen mit der Kraftstoff-Fördereinheit |
| **T26** | Einbau getrennt von der Fördereinheit |
| **T27 …** | Für OE Nummer: ... |
| **T28 …** | Einschränkung (Hersteller): ... |
| **T29 …** | Ausrüstung: ... |
| **T30 …** | Einbauseite: ... |
| **R** | Rechts |
| **L** | Links |
| **H** | hinten |
| **V** | vorne |
| **T31** | Für Fahrzeuge ohne Katalysator |
| **T32** | Für Fahrzeuge mit Ladeluftkühler |
| **T33** | Für Fahrzeuge mit Saugrohreinspritzung |
| **T34** | Für Fahrzeuge mit Klimaanlage |
| **T35** | Für Fahrzeuge mit Anhängerkupplung |
| **T36** | Für Fahrzeuge mit Niveauregulierung |
| **T37** | Für Fahrzeuge mit Kraftstoff-Computer |
| **T38** | Für Fahrzeuge ohne Kraftstoff-Computer |
| **T39** | Für Fahrzeuge ohne Skisack |
| **T40** | Für Fahrzeuge mit Zusatzheizung |
| **T41** | Für Fahrzeuge ohne Zusatzheizung |
| **T42 …** | Betriebsart: ... |
| **EL** | elektrisch |
| **EG** | elektrischgesteuert |
| **T43** | Magnetventil |
| **T44** | Steuerventil |
| **T45** | mit Vor-/Rücklauf |
| **T46 …** | Betriebsspannung [V]: ... |
| **T47** | Tauchrohrgeber |
| **T48** | Hebelgeber |
| **T49** | Zubehörliste |
| **T50** | Teileliste |
| **T51** | Fahrzeugmodelle dienen nur der allgemeinen Information und nicht als ausführliche Anleitung zur Verwendung der Produkte. |
| **T52** | (...) * Die Nummer entspricht nur einer Teilkomponente der OE Nr. Weitere Informationen sind dem Kapitel Produktübersicht zu entnehmen. |
